

To Connect to the Server

From inside the United States, use servers in this range:

`eecad30.eas.asu.edu --> eecad64.eas.asu.edu`

To get Python 3.7, use the `python3.7` on the command line.

From outside the United States, use servers in this range:

`eecad2000.eas.asuu.edu --> eecad2007.eas.asu.edu`

Note: These computers are running Python 3.6. However, this should work fine for this project. Just make sure you are running 3.6.

For both:

`ssh asurite@computer_name`

If your first time connecting to this server, answer yes.

Either way, your asurite password comes next.

Note that the connection will terminate due to lack of activity fairly quickly. This is normal.
